

BARKSKIN™ HANGING INSTRUCTIONS

*First you must decide if you would like the smooth side or the rough side of the **BARKSKIN™** to face the room.*

Use non-staining, clear drying wallpaper paste applied directly to the wall.

*Do not apply paste directly to the **BARKSKIN™** so as to not over wet the product.*

BARKSKIN™ is a hand-pounded natural bark material. No two are alike. Blend **BARKSKIN™** sheets. Do not try to match. There is no dye-lot match. If you decide to hang squares of this material, shuffle your cuts to vary the shading. This will enhance the look. The installer can grade the panels so there is a more gradual variation of color. Being a natural hand-made product, each sheet varies in color.

BARKSKIN™ can be hung by the sheet or cut into squares and installed in a tile pattern.

After application you may decide if you would like to seal with a clear polyurethane finish these are available in both satin (matte) and gloss finishes. Keep in mind it is not always necessary to seal. Other products that are compatible with wood can also be used i.e. stains and other finishes.

BARKSKIN™ is acid free according to the Library of Congress.

CAUTION: Over-wetting this product will cause it to break apart.
